PERSONAL PROJECTS

Language Learning App with OpenAI's ChatGPT

- Developed an interactive language learning chat app utilizing OpenAI's ChatGPT API as an AI tutor.
- Implemented real-time grammar and spelling corrections to enhance users' language proficiency during conversations.
- Integrated features such as language level assessment, word translations, topic switching, and accent preferences for a comprehensive learning experience.
- Supported multiple languages including English, French, German, Spanish, Arabic, and more.
- Utilized React with NextJS, Tailwind CSS, and MongoDB for the development of the application.

Ecommerce Store App, NextJS App

- Implemented an inventory management system for sellers to effectively track and manage product stock levels and orders.
- Created an admin panel for easy management of the store frontend, featured products, and customer data.
- Integrated Stripe payments to facilitate secure and convenient online transactions.
- Implemented OTP verification via email to ensure secure user authentication.
- Supported multiple languages using i18n for a localized experience.
- Developed the website using React with NextJS, TailwindCSS, Redux, MongoDB, and AWS S3 for efficient data storage and retrieval.

Social Media App, React Native App

- Developed a social media platform connecting recycling enthusiasts to foster a community for sharing DIY recycling projects, exchanging materials, and sharing ideas.
- Ensured secure user authentication through email OTP verification using NodeMailer.
- Implemented haptics integration to provide tactile feedback for enhanced user interactions.
- Built the platform using React Native with Expo, Express.js backend, MongoDB, Tailwind CSS, Redux, and Firebase Storage.
